

AI helps buying used car —HOWTO conclude on multiple car checks —for ordinary people, specific for the UK

by [Dima Zaitsev](#)

Many doubts, lots of advice, irritable as summer flies, jumping mood, from adoring the car in question to suspecting a fraud,—do you recognize yourself musing on your next car to buy from a multitude of used cars. “Solid” big sellers or networks are expensive, small companies and individuals are full of surprises, not always pleasant ones.

What is true, you need information. You can use the following free sources:

- **Seller’s car description**
- **Car tax check** <https://cartaxcheck.co.uk>
- **Check MOT history** <https://www.check-mot.service.gov.uk>

Please open the locations, input the number plates, read the info and better save it in PDF files: press on the three dots in the right-upper corner of your browser for the menu, choose “print,” then choose “save as PDF” and possibly correct the offered name.

Then you ask AI questions with respect to the car: share your thoughts, suspicions, happy future plans, etc. You can start using Copilot of your Windows. You upload PDF files with the “+” option and type your questions, say: “Is this car a good one that you advise to buy?” or “Can you conclude on some unreported accidents with the car?” And receive a reply in a split second, a detailed one followed by a brief conclusion, like “No Signs of Hidden Accidents”.

Though, we advise you to create a free ChatGPT account for better quality of response. Just register with your email to upload files with information, and then submit your queries

- **ChatGPT** <https://chatgpt.com>

To improve the conclusion quality, think of supplying more information, both free and paid for

- **Your own written inspection of the car mentioning issues and accompanied with photos**
- **Paid for reports from** <https://cartaxcheck.co.uk> or <https://hpicheck.com> etc
- **Paid for car inspection reports, for example from The AA,** <https://www.theaa.com> etc

I believe my page will help you feeling more confident with your choice and spare your friends and relatives from reprimands in case of some imperfections, having only AI to blame 😊
